# Large central fountain with an obelisk column carved in stone 

This large circular fountain carved in Avy stone is a beautiful garden fountain of 3 meters in diameter. It presents a tall central column carved in the form of an obelisk topped by a stone ball. On 3 of its 6 sides, water outlets in forged wrought iron allow the water to fall into the basin. The octagonal basin consists of 8 molded stones. It rests on a thick octagonal base.
